

HARIKISHOR SAHU

Data Science & Full-Stack Developer | CS & Data Analytics | IIT Patna

harikishorsahu2@gmail.com | +91-6206520431 | Biraal, Darbhanga, Bihar | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Aspiring Data Scientist and Full-Stack Developer with a focus on bridging the gap between raw data and real-world applications. BS CSDA student at IIT Patna with strong problem-solving skills and foundations in Python, Machine Learning, SQL, and Web Development. Delivered multiple end-to-end projects spanning dashboards, RESTful APIs, and full-stack web applications. Seeking internship or entry-level roles to apply data-driven insights and build scalable solutions.

EDUCATION

BS in Computer Science and Data Analytics (CSDA) — **Indian Institute of Technology, Patna (IITP)** 2024 – 2028(Expected)

- Key Coursework: Cloud Computing, Computer and Network Security, Operating System, Artificial Intelligence Techniques, Industrial and Organizational Psychology

Intermediate (Class XII) — Science — **M.L.S.M. College, Darbhanga**

Completed: 2023

- Class XII: 82.4% | Class X: 83%

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, Java, C, SQL (Advanced)
- **Web Development:** React.js, Django, Node.js, Express.js, HTML5, CSS3, REST APIs, Figma
- **Data Science & ML:** Pandas, NumPy, Scikit-learn, Matplotlib, Data Wrangling
- **Business Intelligence & Analytics:** Tableau, Power BI (DAX), Advanced Excel (Pivot Tables, Data Slicers)
- **Databases:** MySQL, MongoDB, SQLite
- **Tools & Version Control:** Git, GitHub, VS Code

PROJECTS

LinkedIn Job Application & Outreach Automator

May 2026

Stack: Python, Selenium, Regex, SMTP, MIME, Data Extraction, Automation

- Engineered an end-to-end Python automation pipeline using Selenium to navigate dynamic DOM structures, implementing custom browser options to successfully bypass anti-bot detection systems.
- Implemented complex Regex (Regular Expressions) to parse unstructured HTML job descriptions, accurately extracting recruiter contact details and email addresses with zero manual intervention.
- Architected a secure email delivery system utilizing SMTP and MIME protocols with TLS encryption to automatically dispatch personalized job pitches and attach PDF resumes, scaling outreach to 50+ targeted applications per week.

Spotify-Inspired Music Streaming Interface

MAR 2026 – APR 2026

Stack: HTML5, CSS3, JavaScript, DOM Manipulation

- Architected a fully responsive, cross-browser music streaming UI, achieving a 90+ Google Lighthouse score for performance and accessibility across mobile, tablet, and desktop devices.
- Engineered advanced layout structures using CSS Grid and Flexbox to build 15+ modular UI components (media players, navigation bars, tracklists), maintaining pixel-perfect design across 3 core screen breakpoints.
- Implemented dynamic interface logic using JavaScript and DOM Manipulation to smoothly handle 20+ interactive user states with zero perceived latency.

Mobile Market Analytics & Time-Intelligence Dashboard

FEB 2026

Stack: Power BI, DAX, Advanced Excel

- Architected an interactive Power BI dashboard analyzing 769M+ in gross sales by processing over 4000+ data rows across multiple demographics.

- Formulated 15+ complex DAX measures to build advanced time-intelligence capabilities, enabling granular MTD and SPLY performance tracking.
- Transformed raw operational data into actionable visual insights, reducing manual reporting time by 40% and accelerating strategic decision-making.

Pizza Sales Performance Analysis

MAR 2026

Stack: Advanced SQL, MySQL, Window Functions, CTEs

- Engineered advanced SQL queries utilizing Window Functions and complex JOINS to analyze a comprehensive dataset of 21,350 orders , processing over 817,860 in total revenue to extract actionable purchasing insights.
- Aggregated operational data to pinpoint peak sales periods around 12 PM and 1 PM , and identified that the 'Classic' pizza category drove the highest business impact with a 26.91% total revenue share.
- Formulated complex queries using subqueries and RANK() OVER(PARTITION BY) to determine the top 3 revenue-generating items per category , delivering data-driven recommendations to optimize inventory and marketing strategies.

Real-Time Chat Web Application (WhatsApp Clone)

DEC 2025 – Jan 2026

Stack: Django, Python, SQLite, REST API, DOM Manipulation

- Architected a scalable, real-time one-to-one messaging platform using the Django Framework and REST APIs, ensuring instant, sub-second communication between active users.
- Engineered a secure identity management system enabling custom User IDs, seamlessly integrating backend session logic with dynamic frontend DOM manipulation for a frictionless UX.
- Implemented an efficient, lightweight SQLite database schema to persistently manage user sessions and chat history, optimizing query execution for fast local data retrieval.

RESTful User Authentication API

APR 2026

Stack: Node.js, Express.js, MongoDB, JWT, bcrypt, REST API

- Engineered a secure RESTful API under faculty guidance using Node.js and Express.js, developing structured routing for 5 core CRUD endpoints integrated with a MongoDB database.
- Implemented custom security middleware leveraging JSON Web Tokens (JWT) to protect private routes, ensuring zero unauthorized access to sensitive user data and endpoints.
- Designed a scalable, production-ready backend architecture utilizing bcrypt for robust password hashing and secure session management protocols.

Real-Time Weather Forecasting Web App

Jan 2026 – Feb 2026

Stack: Django, Python, HTML5, CSS3, OpenWeatherMap API, JSON

- Architected a real-time weather forecasting application by integrating the OpenWeatherMap REST API with a Django backend, efficiently parsing JSON data payloads to fetch live meteorological metrics based on user queries.
- Engineered a responsive and interactive frontend using HTML5 and CSS3 to dynamically visualize 3+ key weather parameters (temperature, wind speed, humidity), ensuring seamless cross-device compatibility.
- Implemented robust location-based search functionality with comprehensive API error handling (managing 404/invalid inputs), preventing application crashes and ensuring a highly reliable User Experience (UX).
